AI Agent Engineer with over 3 years of experience in **Machine Learning, Python** and **Full-Stack Development**. Specializes in building **Agentic AI systems** using **LLMs**, **Vector Databases**, and **RAG frameworks**. Currently developing enterprise meeting assistants at HKT, utilizing **React.js** and **Nest.js** within a strict CI/CD environment. Experienced in high-performance backend architecture, including **GoLang microservices** and **gRPC**. Adept at translating business needs into technical designs and driving digital transformation for non-technical stakeholders.

Projects

AI Meeting Summary App — HKT, 2026

A platform to generate summary and insights from meeting recordings

- Developing an **enterprise-grade** meeting assistant that transcribes audio (**Whisper**) and generates summaries, action points and insights.
- Engineered an asynchronous task queue system (**BullMQ**) to handle high-concurrency audio processing.

AI Agent — Oodles Systems, 2025

A smart system automating complex tasks without human interference.

- Designed a fully autonomous agentic system that **automates workflows** for Tender, HR and Admin depts.
- Implemented **RAG** on NAS servers and orchestrated multiple agents using **Model Context Protocol (MCP)**.
- Successfully automated complex tasks like resume filtering and payment voucher processing.

AI YouTuber — Self Project, 2025

A platform to create and edit long videos with just a few clicks

- Uses many SOTA AI models to generate script, speech, image and music, then integrate them into wonderful YouTube videos.
- Autonomously making 1000+ views per video with s**uper low maintenance**.

Enterprise HR Management System — Self Project, 2026

An Enterprise HRMS built with React.js, GoLang, Microservices and gRPC

Real-time Customer Attention Tracking — HKUiT, 2024

A system to record which products customers are looking at or touching

Trading with Momentum Transformer — Graded A-, MSc, 2023

An finetuned, optimized transformer model for trading

Graded A-, BEng, 2021

A light-weight CNN for Object Recognition

A mobile app deployed with finetuned MobileNet, ShuffleNet and Xception

Employment History

Senior AI Application Developer — November 2025 – Now

Hong Kong Telecom

- Developing and maintaining **Generative AI solutions** within a large-scale enterprise environment.
- Collaborating with cross-functional teams to **integrate AI tools into the corporate ecosystem**.
- Adhering to strict GitLab CI/CD workflows and Agile methodologies to ensure code quality and security.

Artificial Intelligence Engineer — October 2024 – October 2025

Oodles Systems Limited, Success Base Engineering Limited

- **Independently designed, developed and deployed an AI Agent system from scratch**, including LLMOps, MCP servers, agent orchestration, vector database, RAG, access management, backend, frontend, CI/CD in a scalable, secure, agile manner.
- **Kept abreast of SOTA AI models and algorithms**, including generative models for text, images, speech-to-text, speech, video, and 3D, as well as model training methods and architectures.
- **Met regularly with the CEO and Department Heads** to align on AI vision and strategies.

Artificial Intelligence Engineer — October 2023 – September 2024

Hong Kong Univisual Intelligence Technology, HKU Sports & AI Lab

- Successfully led multiple ICT award-winning projects. Clients include LCSD, OGCIO, MTR, HOHCS, and more.
- Successfully handled multiple projects encompassing the **entire MLOps lifecycle** from data collection, model training and testing, pruning, to deployment and fine-tuning.
- Proactively **researched and built PoCs** for ML/CV related projects, measuring and optimizing performance of data pipelines, model training, and inferencing.
- Led a group of interns and collaborated with cross-functional teams, fostering a cooperative environment.

Web Development Intern — June 2020 – August 2020

Friday Company Limited

- Developed the frontend of the company website
- Engaged in business development and marketing meetings

Research and Development Intern — June 2019 – August 2019

Institute of Automation, Chinese Academy of Sciences (中國科學院自動化所)

- Researched and implemented Sonar Data Visualization, Cleansing and Denoising Algorithms for an Autonomous Underwater Vehicle project.

Education

September 2021 – November 2023

Master of Science (Computer Science) / University of Hong Kong

September 2017 – June 2021

Bachelor of Engineering (Computer Science) / University of Hong Kong

Skills and Knowledges

Artificial Intelligence • AI Agent • MCP • RAG • Vector Database Management • Context Management • Prompt Engineering • LLMOps • Software Engineering • API Development • Full-stack development • Diffusion Model • Transformer • LLM • Machine Learning • Computer Vision • Deep Learning • Object Detection • Model Acceleration • NLP • Cloud Computing • Data Mining and Analysis • and more

Proficient Languages and Tech Stacks

Generative AI:

- Agentic Workflows • RAG • Prompt Engineering • MCP

MLOps:

- Python • PyTorch • TensorFlow • FastMCP • LangChain • LangGraph • HuggingFace Libraries • OpenAI libraries • ONNX • TensorRT • OpenCV • Numpy • Pandas • and more

Database:

- Vector DB • SQL • PostgreSQL • Milvus • MySQL • MongoDB • Prisma ORM • and more

Web Application Development:

- React.js • Nest.js • GoLang • Microservices • gRPC • FastAPI • TypeScript • and more

DevOps:

- Docker • Kubernetes • GitLab CI/CD • Azure • AWS EKS • Grafana • KeyCloak • and more
